- 5. In the past our Company could not honor loan obligations to Bank of Baroda. In the year 2000 the Company had to shut down operations for five years due to non availability of working capital funds. The outstanding was repaid to bank in F.Y. 2005-06 with onetime settlement of Rs.90.00 lacs.**

The Company had availed working capital facility from Bank of Baroda since 1995. However, Increase in import duty on raw material (lead metal) to 55% (presently, it is around 21%) made our finished product costly resulting to low demand and affecting the financials of the Company. During this phase of turbulence the Company could not honor its loan repayment and the loan account was classified as Non Performing Asset. The shortage of funds and the prevailing industrial policy did not favour the company to continue its business and resulted in temporary closure of the unit. A case was filed by the bank in the Debt Recovery Tribunal, Jaipur which was withdrawn on 09/01/2006 after paying one time settlement sum of Rs.90.00 lacs.

We cannot guarantee that similar situation may not arise in future on account of any unfavorable government policies, strict environmental regulations or non-availability of level playing field which may have negative impact on the operations and financials of the Company.

- 6. We have been under utilizing our capacity for last three years**

In last three years our Company has under utilized the installed capacity for various products. We cannot assure that our Company will be able to increase its capacity utilization as compared to the previous years.

Management Proposal

The installed capacity in our Company is related to the capacity of kettles installed at our manufacturing facility. The capacity is first utilized to blend the composition of elements which are present as impurities in the raw materials procured by us. Once the raw material is blended with known compositions of impure elements they can be easily used to produce different forms of lead. The process of removing the impurities from the raw material and further batching it utilizes part of the capacities of the manufacturing unit. These are not reflected while we roll out the finished products in different forms and hence it is difficult to relate the production figures with the actual utilization of our capacities. Further, since we produce a wide range of products in lead we have built special capacities for certain alloys and oxides which are high end value added products.

- 7. Our Project is not appraised by any Bank or Financial Institution.**

The proposed project for which the funds are being raised has not been appraised by any Bank or Financial Institution and the fund requirements are based primarily on Management estimates. There is no guarantee that our estimates will prove to be accurate and any significant deviation in the project cost could adversely impact our operations and sustainability.

- 8. The implementation of the project is at a very preliminary stage. Any delay in implementation of the same may increase the capital cost and also affect returns from the project.**

We are in the process of enhancing our capacities through the proposed expansion. Same is being implemented partly on the land available on adjacent location. We have estimated the cost and drawn

the implementation schedule based on our experience. Presently, the implementation is at a preliminary stage. We are also in the process of making application for statutory approvals, governmental approvals and other approvals as required under the law for establishing new units at respective locations. We have obtained quotations from various vendors but have not placed the orders for machineries and equipments for our additional manufacturing unit at Jaipur and new unit at Maharashtra. Any delay in obtaining these permissions and approvals or delay in setting up new units may increase the capital cost as compared to estimated and shall also affect the timeline of realisation of returns from the project.

9. **We have identified the land for Jaipur unit but are yet to enter into material agreement in regard to same. Our Company proposes to use the issue proceeds amounting to Rs.200 lacs for purchase of land from group Company namely, Jalousies (India) Private Limited which is owned by the relatives of our promoters. The group company is owned and controlled by Mrs. Shashi Agarwal, wife of Dr. Mahaveer Prasad Agarwal (Promoter of Gravita) and Mrs. Anchal Agrawal, wife of Mr. Rajat Agrawal (Promoter of Gravita). There has been no independent land valuation done by the Company.**

We are proposing to set up new manufacturing facility at Jaipur and the total land required for the proposed unit is 10,000 sq meter. We propose to use the issue proceeds amounting to Rs.200 lacs for purchase of land from group Company namely, Jalousies (India) Private Limited and Rs.25 lacs towards development of the same. The said land is owned by our group company which is owned/controlled by the relatives of the promoter's of our Company. The group company is owned and controlled by Mrs. Shashi Agarwal, wife of Dr. Mahaveer Prasad Agarwal (Promoter of Gravita) and Mrs. Anchal Agrawal, wife of Mr. Rajat Agrawal (Promoter of Gravita). Thus there is a conflict of interest. Further, there has been no independent valuation of land done by the Company

10. **We have not identified land for our proposed Maharashtra unit.**

We propose to spend a sum of Rs.125.00 lacs for purchase of land at Wada, Maharashtra for new facility. Economic upturn in the real estate prices may compel us to invest higher amount for purchase of land or compel us to identify new location which may lead to delay and overrun of total estimated project cost at the desired locations.

11. **Our Company is in the process of exploring overseas locations at Australia, Belarus, Chile and Mexico for setting up of new project and have not yet identified the said locations.**

Our Company has identified potential countries for setting up of new project in Australia, Belarus, Chile and Mexico which shall be funded through the issue proceeds. The Company is still under process to finalize the locations for the same.

As on date our company has not obtained any RBI approval in respect of new projects proposed to be set up in Australia, Belarus, Chile and Mexico. The company is permitted to make investment in overseas joint venture/wholly owned subsidiaries not exceeding 400% of the networth of the Indian company as on the date of last audited Balance Sheet under the "Automatic Route" prescribed in RBI circular on direct investment by residents in joint ventures/wholly owned subsidiaries abroad. Under the said route the company is not required to obtain prior approval but is required to comply with various provisions of the said RBI circular. Any delay in identifying and finalizing these locations shall result in cost over run or identification of new locations at a cost higher than the estimated by the Management. Further, we may need certain approvals from regulatory authority in India and/or from regulatory authorities at the respective countries where we propose to set up new projects.

- 12. We have not placed orders for the machineries and other equipments proposed to be purchased by us as a part of the expansion/new facilities at Jaipur and Maharashtra. We may face time and cost overruns in relation to the same.**

We shall be utilizing the issue proceeds for purchase of plant and machinery as stated in the objects of issue (please refer to the objects of the issue for details commencing from page no. 39). We have obtained quotations for machinery and other equipments but not yet entered into any definite agreements or placed orders for machinery and other equipments required for Jaipur and Maharashtra unit. We are subject to the risks on account of inflation in the price of machinery and other equipment that we require for the project. Further, in respect of the machinery/ equipment/ other project related services that we propose to import/procure from overseas, we may be subject to the risks arising out of currency rate fluctuations. These factors may increase the overall cost of our project and have an adverse effect on our business and results of operations.

- 13. We have not appointed any independent agency for monitoring of utilization of issue proceeds and the same shall be deployed entirely by us.**

Our senior management and audit committee shall be the responsible to monitor the utilization of issue proceeds. We are not appointing nor intend to appoint any independent agency who shall be responsible for this activity. But we shall be disclosing the amount utilized in every quarter as part of compliance requirement as per the Listing agreement with the Stock Exchanges. Further the Audit Committee will review with the management the statement of uses/application of funds raised through public issue and statement of funds utilized would be submitted to the Board of Directors in terms of clause 49 of the Listing Agreement.

Our company has proposed to invest Rs.235.00 lacs in Gravita Honduras SA a Joint Venture company incorporated under the law of Honduras to set up new project at Honduras. Though the Company has acquired land for this purpose, implementation of the project depends on our other Joint Venture partners. Any delay in receiving the committed funds from them may affect the implementation of the project. The Company is yet to enter a formal agreement in respect of the said Joint Venture.

- 15. Our requirement of working capital based on financial year ended on March 31, 2010 is yet to be assessed. Further, the expansion plans would require additional sanctions of working capital limits by banks.**

Our Company is in discussion for sanctions of additional working capital limits based on financials of March 31, 2010. Our Company would require additional sanctions in view of expansions and growth plans being proposed. Delay in sanctions from the banks may result in having an adverse effect on our operations.

- 16. Our inability to retain the top management personnel may affect the Company's performance.**

The success and growth of our company is largely contributed by our senior management personnel in the past and shall highly depend upon their continued services. Any loss of existing human capital or inability to attract and retain new senior management personnel in future may have an adverse impact on the operations and financials of the Company.

17. Any major break down at our plant may stop the operations of the company till the same is made functional.

Our company being a manufacturing Company is totally dependent on its efficient functioning of plant and machinery for manufacturing the products. Any technical or operational failure of our plant and machinery shall impact our production for such time period till the time it is functional. This failure may occur due to technical snag in parts of the machinery, improper maintenance activity carried out, manual error in operating the machinery or such other reasons. The other disruptions leading to failure may include extreme weather conditions, fire, natural catastrophes. Any instance of the said nature occurring in the company would directly impact the operational cost and financials of the company.

18. Non-availability or limited availability of raw materials or other utilities may lead to disruption in the production schedule of the company.

Our Company is exposed to possible unpredictability in the supply of raw materials as we import scrap metal from other countries due to price benefit as compared to India. Any market related adverse movement in the supply of raw material or/and any regulatory impact on import of raw material may lead to disruption in the production schedule. Lack of availability of other resources such as water, skilled manpower, etc. may also affect the operations and the profitability of the Company.

19. If we are unable to obtain required approvals and licenses in a timely manner, our business and operations may be adversely affected.

We may from time to time, require certain approvals, licenses, registrations and permissions for undertaking our business for which we may be required to make applications in the future. If we fail to obtain any of these approvals or licenses, or renewals thereof, in a timely manner, or at all, our business could be adversely affected. For further details please see section titled "Business Overview" and "Government/ Statutory and Business Approvals" beginning on page no. 70 and page no. 196 of this Prospectus.

20. We have issued equity shares during the last 12 months at a price which is substantially lower than the Issue price.

We have made further allotment of 41,47,250 equity shares of Rs. 10/- each to Promoters and Promoter Group on 05/09/2009 at an issue price of Rs.10.00 each. The Company has allotted bonus shares to the shareholders of the Company on 07/09/2009 in the ratio 1:2 (one equity share for every two equity shares). Accordingly, the promoters were allotted 25,37,920 bonus shares. On account of the issue of bonus shares by the Company the cost per share of promoters is reduced from Rs.10/- to Rs.6.66/-

21. Restrictive Covenants

There are certain restrictive covenants in the agreements entered into by us with the Banks/ Institutions from whom we have borrowed. Such restrictive covenants among other things require the Company to obtain prior permission from them for change in Management, declaring dividend and undertaking of new project etc. which may limit Company's discretion in these matters.

Management Proposal

These covenants are general in nature and are not expected to affect the operations of the company significantly.

EXTERNAL RISK FACTORS

22. Impact of currency fluctuation

Having a global presence with import and export trade, we are subject to currency rate fluctuation volatility. Any change in the currency rates may have an impact on the financials of the Company which may result into gain or losses. Though we have adopted hedging technique in past to insulate us from the movement in currency rates it cannot be assured that we shall be effectively managing the same in future.

23. Changes in price of Lead metal on London Metal Exchange

In last one year (September 21, 2009 to September 20, 2010) the commodity market has seen a wild swing of lead price movement in a range of \$1550 to \$2600 per MT. The competitive pricing of our products are gauged from the industry prices and the price stated on the London Metal Exchange. Any downturn in the prices on the Exchange may put pressure on our pricing of export products and shall impact financials of the Company.

24. Lead industry is one of the health hazardous industries and is governed by strict environmental laws and regulations which may become more stringent in times ahead. Any non-compliance of these laws and regulations could affect the business of company.

The scope and extent of new environment regulations including their effect on operations of the company cannot be predicted with certainty. The company may require incurring of significant expenses to comply with things like environment monitoring, emission norms etc. Any non compliance of norms and regulations or delay in compliance of the same may affect the future expansion plans. Our company may even be imposed penalty by the approved authority which would have adverse impact on the company's balance sheet.

Environmental regulation of industrial activities in India may become more stringent, and the scope and extent of new environmental regulations, including their effect on our operations, cannot be predicted with any certainty. In case of any change in environmental, or pollution regulations, the company may be required to incur significant amounts on, among other things, environmental monitoring, pollution control equipment and emissions management. The company may also be required to bear additional expenditure for the establishment of additional infrastructure, such as laboratory facilities for monitoring pollution impact and effluent discharge. Such additional costs may adversely affect our results of operations.

26. A slowdown in economic growth in India could materially and adversely affect the Company's results of operations and financial condition

The Company's performance and the quality and growth of its business are dependent on the health of the overall Indian economy. There have been periods of slowdown in the economic growth of India during the 1990s and 2008-09. Any future slowdown in the Indian economy could harm the Company's results of operations and financial condition.

27. Changes in Indian Government policies could adversely affect economic conditions in India, and thereby adversely impact the Company's results of operations and financial condition

The Company and the market price and liquidity of the equity shares, may be affected by Indian Government's policy changes in India. For example, rising interest rates, increases in taxation or the creation of new regulations could have a detrimental effect on the Indian economy generally and the Company in particular. The Indian Government has in recent years sought to implement economic reforms, and the current Indian Government has implemented policies and undertaken initiatives that continue the economic liberalization policies pursued by previous Indian Governments. However, the roles of the Indian Government and the State Governments in the Indian economy as producers, consumers and regulators have remained significant and there can be no assurance that liberalization policies will continue in the future. Any significant change in such liberalization and deregulation policies could adversely affect business and economic conditions in India generally and the Company's results of operations and financial condition in particular.

28. Global economic, political and social conditions may harm the ability of the Company to do business, increase its costs and negatively affect the stock price.

External factors such as potential terrorist attacks, acts of war or geopolitical and social turmoil in many parts of the world could constrain the ability of the Company to do business, increase its costs and negatively affect the Company's stock price. These geopolitical, social and economic conditions could result in increased volatility in India and worldwide financial markets and economy, and such volatility could constrain its ability to do business, increase its costs and negatively affect the stock price of our Company.

29. Natural calamities could have a negative impact on the Indian economy and cause the business to suffer.

India has experienced natural calamities such as earthquakes, tsunamis, floods and drought in the past few years. The extent and severity of these natural disasters has an impact on the Indian economy. Any negative impact of natural disasters on the Indian economy could adversely affect our business and the market price of our Equity Shares.

30. Price of our equity shares may be volatile or an active trading market for its equity shares may not develop.

Price of our equity shares on the Stock Exchanges may fluctuate as a result of several factors including:

- Volatility in Indian and global securities market;
- The results of operations and performance of our Company;
- Performance of the competitors;
- Adverse media reports, if any, on the Company or the Metal Industry;
- Changes in the estimates of the performance or recommendations by financial analysts on our Company;
- Significant development in India's economic liberalization and de-regulation policies; and
- Significant development in India's Fiscal and environmental regulations.

We cannot assure you that an active trading market for company's equity shares will develop or be sustained after this Issue or the price at which the Equity Shares of our Company are initially traded will correspond to the prices at which the Equity Shares will trade in the market subsequent to this Issue.

SECTION II - INTRODUCTION

SUMMARY OF THE INDUSTRY AND BUSINESS OF THE COMPANY

INDUSTRY OVERVIEW

Historical Background

Lead has been extracted and used since the earliest periods of history. The oldest known lead article is a metal figure, found in Egypt, believed to date from 4000BC. Other finds from ancient periods have been principally statuettes and figures.

Though lead was well known, the amount used was very small until the time of the Roman Empire. Earlier, it appears that lead was often an unwanted byproduct of silver extraction (as the two metals frequently occur together). Being neither strong nor shiny, lead was much less prized than copper, iron or the precious metals. However, the demand for piped water by the Romans resulted in its large scale use for piping, lining of tanks, aqueducts and so on. Lead and lead rich pewter was also used for domestic articles such as kettles, cooking pots and tableware. Other uses of lead included ornaments, coffins, alloying additions in bronzes used for statues, tankards and some coins; lead tablets were sometimes used for inscriptions; and lead weights. The use of lead for ammunitions has been known since ancient times.

The bright colours of many lead compounds have been exploited since very early times, for paints and pigments; black, white, yellow and red coloured compounds were also widely used as cosmetics. Lead-rich glazes were used on ceramics by the ancient Egyptians and others; leaded glasses were also known in the ancient world, and used because of their ease of melting and strong colours.

Even though harmful effects of lead were recognised, or at least suspected, lead and its compounds were also considered therapeutic for a variety of ailments, and ointments were believed to work better if stored in lead containers. (Source: www.ILA-lead.org)

- Radiation Shielding
- Constructional uses: pipe and sheet
- Pigments and other paint additives
- Additives to PVC Stabilisers

CONSUMERS OF LEAD

Lead is mainly consumed by the battery industry (mainly automobile batteries), while rolled and extruded products and pigments are the other significant consumers.

(Source: International Lead and Zinc Study Group: Press Release dated September 16, 2010)

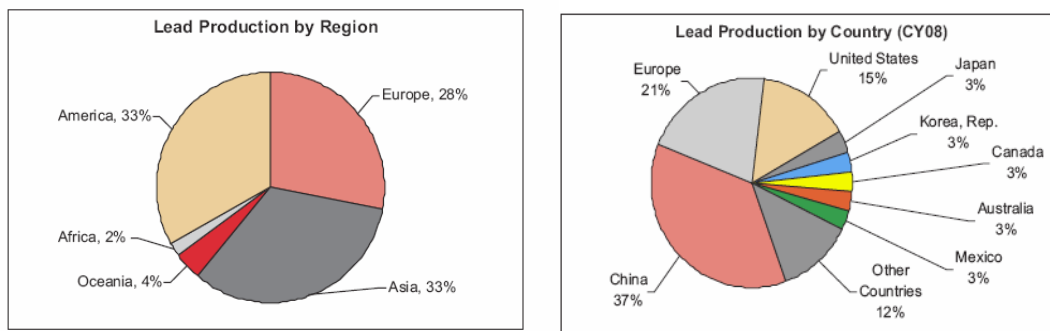

- Preliminary information suggests that global output of refined lead metal exceeded usage by 52kt over the first seven months of 2010 and that reported inventory level increased by 30kt over the same period.
- An increase in world lead mine production of 10.9% was principally due to increases in China, India, Mexico and the Russian Federation.
- Higher production of refined lead metal in Germany, Canada, China and Japan more than offset reductions in Italy and the Republic of Korea resulting in an overall global increase of 2.6%.
- Despite a decrease in Chinese apparent usage of refined lead metal of 1.5%, world demand increased by 3.3%. This was mainly a consequence of rises in Europe (5.8%), the United States (6.4%), Japan (24.2%) and the Republic of Korea (20%). (Source: International Lead and Zinc Study Group: Press Release dated September 16, 2010)

Global Lead Industry Overview

- Global production of lead has grown from 4mn tonnes in the 1960s, to 6mn tonnes in the 1990s, to around 9mn tonnes p.a. currently.
- Secondary production or recycling is the main source of lead vis-à-vis mining and accounts for almost around 70% of usage worldwide.

- Batteries industry (mainly automobile batteries) is the main consumer of lead, accounting for 80% of total demand. Pigment industry is the next largest consumer of the lead, which consumes 5% of total production.
- Global lead production and consumption grew at a CAGR of 5% and 4.8% respectively during CY03-08. Lead demand exceeded supply in during CY03-07, which reversed in CY08.

(source: www.ilzsg.org)

OVERVIEW OF INDIAN LEAD INDUSTRY

1/3rd of the lead production in India comes from primary sources like mining and the balance from the secondary sources mainly recycling. India lacks lead ore reserves and hence it necessitates large scale imports and secondary sources such as recycling. Lead is amongst the most recycled non-ferrous metal. The main input from lead recycling comes from lead acid battery scrap which is a hazardous material. The only primary lead smelter is Hindustan Zinc of the Vendanta Group which contributes to 16% of the total supply in the country while the secondary smelters contribute 22% of lead supply, approximately 30% of supply is contributed by the unorganized sector and the balance is met by imports. The estimated demand of lead is 500,000 tonnes. The demand is expected to grow at a rate of 6% which is being driven due to demand for automobile batteries and invertors and UPS applications.

Note: During the F.Y. 2007-08, the Company availed new credit facility from Punjab & Sindh Bank, Jaipur in the form of Cash Credit, Packing Credit, FOBP and FLC/Inland Letter of Credit Irrevocable (on demand). The same was utilized from November 2007. The Company utilized these facilities only for a period of four months. As a result though the outstanding secured loans were higher, the interest was lower compared to 2008-09. This loan facility was utilized for all quarters in the F.Y. 2008-09 and later repaid in the same financial year leading to higher interest outflow. The outstanding secured and unsecured loan as on 31/03/2009 are on lower side on account of repayment.

SECTION - III ABOUT THE ISSUER COMPANY

INDUSTRY OVERVIEW

The information in this section is derived from a combination of various official and unofficial publicly available materials and sources of information. It has not been independently verified by the Company, the Book Running Lead Manager or their respective legal advisors, and no representation is made as to the accuracy of this information, which may be inconsistent with information available or compiled from other sources.

Historical Background

Lead has been extracted and used since the earliest periods of history. The oldest known lead article is a metal figure, found in Egypt, believed to date from 4000BC. Other finds from ancient periods have been principally statuettes and figures.

Though lead was well known, the amount used was very small until the time of the Roman Empire. Earlier, it appears that lead was often an unwanted byproduct of silver extraction (as the two metals frequently occur together). Being neither strong nor shiny, lead was much less prized than copper, iron or the precious metals. However, the demand for piped water by the Romans resulted in its large scale use for piping, lining of tanks, aqueducts and so on. Lead and lead rich pewter was also used for domestic articles such as kettles, cooking pots and tableware. Other uses of lead included ornaments, coffins, alloying additions in bronzes used for statues, tankards and some coins; lead tablets were sometimes used for inscriptions; and lead weights. The use of lead for ammunitions has been known since ancient times.

The bright colours of many lead compounds have been exploited since very early times, for paints and pigments; black, white, yellow and red coloured compounds were also widely used as cosmetics. Lead-rich glazes were used on ceramics by the ancient Egyptians and others; leaded glasses were also known in the ancient world, and used because of their ease of melting and strong colours.

Even though harmful effects of lead were □tilization, or at least suspected, lead and its compounds were also considered therapeutic for a variety of ailments, and ointments were believed to work better if stored in lead containers. (Source: www.ILA-lead.org)

Properties

Lead is bluish grey in colour, dense, ductile and malleable (i.e. it can be hammered into shape), ease of production, ease of melting and joining, and very good corrosion resistance in most common environments. It is thermal and electric conductive and having very low melting point which has increased its utility. Due to these properties Lead has been used for variety of purposes as mentioned below in uses and applications.

Uses and Applications of Lead

- **Lead-acid storage batteries**

The major use worldwide, primarily as a starter battery in motor vehicles, but also as traction batteries for zero-emission electric vehicles and to provide emergency backup power supply, mostly for computer and telecommunication systems. Good rates of recycling are already achieved for starter batteries, though they could be improved upon in some countries; very high recycling rates are achieved for traction and backup batteries. Alternatives are under development for some applications, though at present these could not replace lead at comparable cost, or for technical reasons.

- **Radiation Shielding**

Lead is the most effective of the commonly available materials for screening from X-rays and some other types of radiation. It is widely used in hospitals as part of X-ray equipment, and also in nuclear power stations for X-Ray and Gamma Shielding.

- **Constructional uses: pipe and sheet**

Lead piping is now a minor application, as it is no longer used for domestic water supplies because of concerns that lead slowly dissolves in soft water and may pose a risk to health, and because of improvements in alternative materials. However, much lead piping remains in place. New lead pipes are used in the chemical industry.

Lead sheet is widely used on roofs for flashings and weather proofing, and is often used for complete roofs on both historic and modern buildings. It also used for soundproofing in office building, schools, Hotels, Hospitals etc.

- **Pigments and other paint additives**

Lead compounds were widely used until a few decades ago. They have been replaced in certain applications following concerns about potential impacts to human health. Leaded paints are still used in □tilization outdoor applications as coatings for commercial vehicles and other industrial applications because of excellent rust-proofing properties. Lead dryers are still used in alkyd-based air drying paints as very efficient and cost effective through-dryers.

- **Additives to PVC Stabilisers**

Small additions of organic lead compounds to some grades of PVC improve durability and heat resistance, both in manufacture and in service. This is a significant market for lead compounds.

- **Glasses and glazes**

Lead additions improve the appearance and cutting properties of crystal glass. Small additions are also made to optical and electrical glass. The major application of leaded glass is in television screens and computer monitors, to protect viewers from the harmful X-rays generated by these appliances. Lead containing glazes are used for some pottery, tiles and tableware.

- **Ammunition Purpose**

Lead is widely used in shot and other ammunitions. Some alternatives are available, and are used in situations where lead poses a particular risk to wildlife, especially to birds, as a result of ingestion.

- **Cable sheathing**

Lead sheaths are used to protect underwater and some underground power cables. This is now a minor application of lead.

- **Wheel Weights**

Its high density has proved effective for weights and anchors for fishing lines, boats. Lead is also used extensively in weighting applications.

- **Lead alloys**

Lead-tin solder is widely used, particularly by the electronics industry. Very minor applications are in bearings and ornamental ware (pewter) – though alternative materials are now generally used. Small additions of lead are made to some steels, brasses and bronzes to improve machining ability.

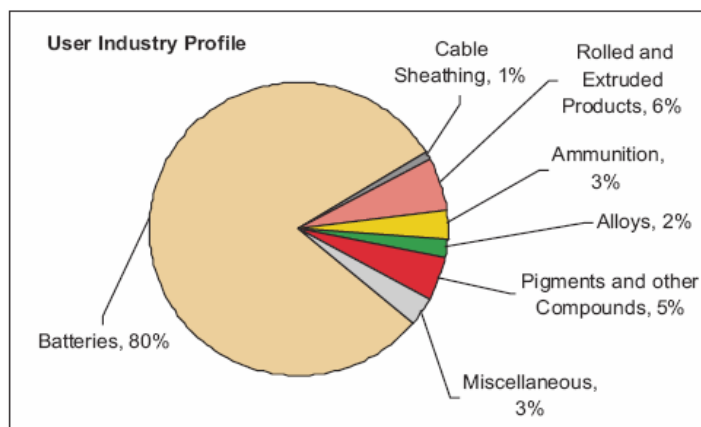

- **Leaded petrol**

Lead compounds were universally added to petrol to improve its efficiency at low cost. This has been the major source of lead emissions to the environment. It is now being phased out almost universally because of concerns about health impacts.

Consumers of Lead

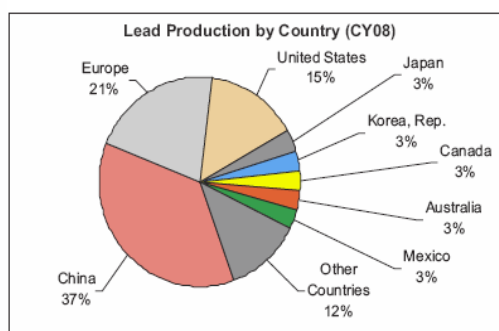

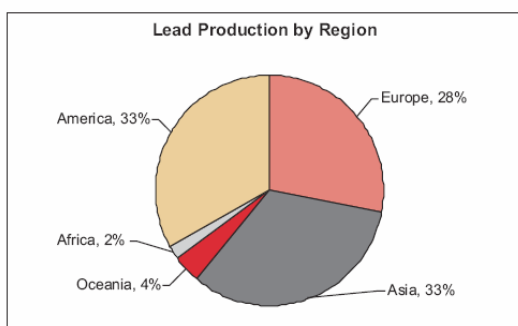

Lead is mainly consumed by the battery industry (mainly automobile batteries), while rolled and extruded products and pigments are the other significant consumers.

Global Lead Industry Overview

- Global production of lead has grown from 4mn \square tili in the 1960s, to 6mn \square tili in the 1990s, to around 9mn \square tili p.a. currently.
- Secondary production or recycling is the main source of lead vis-à-vis mining and accounts for almost around 70% of usage worldwide.
- Batteries industry (mainly automobile batteries) is the main consumer of lead, accounting for 80% of total demand. Pigment industry is the next largest consumer of the lead, which consumes 5% of total production.
- Global lead production and consumption grew at a CAGR of 5% and 4.8% respectively during CY03-08. Lead demand exceeded supply in during CY03-07, which reversed in CY08.

- Preliminary information suggests that global output of refined lead metal exceeded usage by 52kt over the first seven months of 2010 and that reported inventory level increased by 30kt over the same period.
- An increase in world lead mine production of 10.9% was principally due to increases in China, India, Mexico and the Russian Federation.
- Higher production of refined lead metal in Germany, Canada, China and Japan more than offset reductions in Italy and the Republic of Korea resulting in an overall global increase of 2.6%.
- Despite a decrease in Chinese apparent usage of refined lead metal of 1.5%, world demand increased by 3.3%. This was mainly a consequence of rises in Europe (5.8%), the United States (6.4%), Japan (24.2%) and the Republic of Korea (20%). Price trends

LME lead prices witnessed a sharp upside between January 2004 and October 2007. However, the global economic melt down pulled prices down to almost a 2 ½-year low of \$880 per tonne in December 2008.

A recovery in demand for lead has however helped improve the pricing scenario over last 9 months. Lead prices have since moved up by 178% till September 2009 from the lows in December 2008, to around \$ 2,125 currently.

Overview of Indian Lead Industry

1/3rd of the lead production in India comes from primary sources like mining and the balance from the secondary sources mainly re cycling. India lacks lead ore reserves and hence it necessitates large scale imports and secondary sources such as recycling. Lead is amongst the most recycled non-ferrous metal. The main input from lead recycling comes from lead acid battery scrap which is a hazardous material. The only primary lead smelter is Hindustan Zinc of the Vendanta Group which contributes to 16% of the total supply in the country while the secondary smelters contribute 22% of lead supply, approximately 30% of supply is contributed by the unorganized sector and the balance is met by imports. The estimated demand of lead is 500,000 tonnes. The demand is expected to grow at a rate of 6% which is being driven due to demand for automobile batteries and invertors and UPS applications.

Lead - Outlook for 2010

Supply

- Global lead mine production is forecast to increase by 5.1% to 4.20 million \square tili in 2010. This will be primarily as a consequence of higher output in Australia, China, India and Mexico.
- There is a further anticipated 11.9% rise in Chinese production, the commissioning of new operations in Brazil and India, and a return to normal production levels at a number of plants that were operating at reduced rates in 2009. These will be the main influences on an expected 7.5% rise in global refined lead metal output to 9.41 million \square tili this year

Usage

- Global demand for refined lead metal is forecast to rise by 7.3% to 9.31 million \square tili in 2010. This will be mainly driven by a further 9.1% increase in usage in China where strong growth in the industrial battery sector and further rises in automotive and e-bike sales are anticipated.
- After declining by 17% in 2009, European demand is expected to increase by 3.2% this year. A similar trend is anticipated in the United States where a rise of 2.8% is predicted after a decline of 6.3% last year.

World Refined Lead Metal Balance

Overall, after having taken into account the latest information received from its member countries, the Group expects that supply of refined lead metal will continue to exceed demand in 2010 and that the market will remain in surplus. The extent of the oversupply is currently estimated at just under 100,000 tonnes. (Source: International Lead and Zinc Study Group: Press Release dated April 29, 2010)

Battery Recycling Segment in India

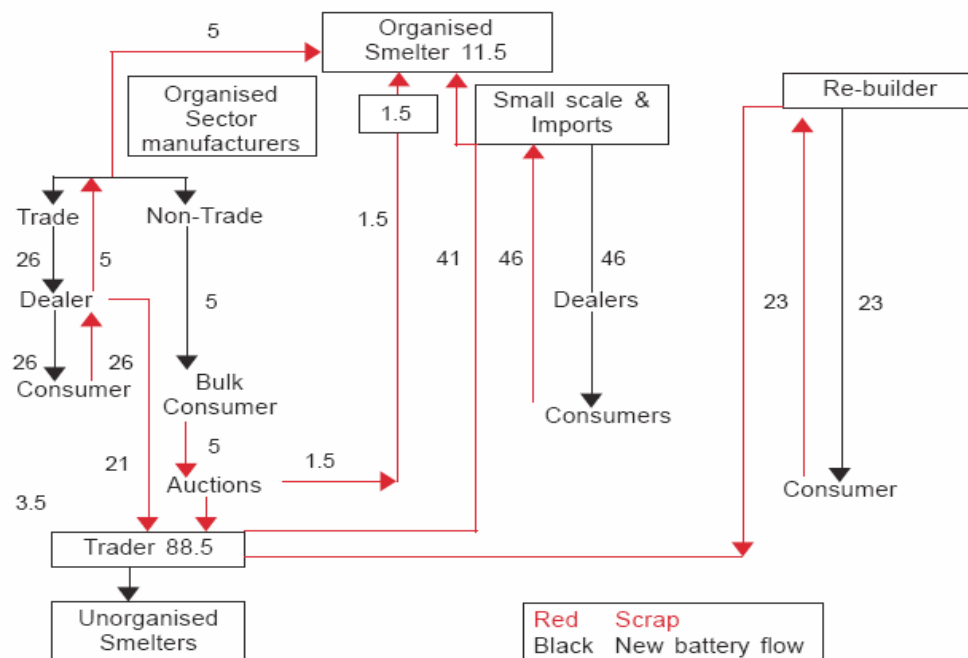

Growth in the automobiles industry and other user industries has led to increased demand for lead-acid batteries. Disposal and recycling of the batteries is a major issue across the world. If processed in proper facilities and under environmental friendly conditions, the spent battery is 99% recyclable. Over 60% of the global demand is met by secondary lead itself. Secondary smelting also has low energy consumption as compared to extraction from ore.

Trade in lead-acid batteries, used chiefly in automobiles, is a big business worldwide: major exporters are Japan, Australia, the US and the UK. Japan, for instance, exports 30,000 tonnes to Southeast Asia each year. These batteries are smelted to recover and recycle lead. Unlike developed countries such as USA and Japan, India lacks a network for collection of used batteries. Often these used batteries find their way to backyard smelters in the unorganized sector who smelt lead inefficiently and are environmentally unfriendly. Since lead is of hazardous nature it can cause serious damage to the environment. It is estimated that almost 4 million batteries in India are still disposed in an unsafe manner. With the view to address this concern the Ministry of Environment and Forests (MoEF) framed the Batteries (Management and Handling) Rules, 2001. These rules apply to every manufacturer, importer, re-conditioner, assembler, dealer, recycler, auctioneer, consumer and bulk consumer involved in manufacture, processing, sale, purchase and use of batteries or components. These rules specify that only those who possess environmentally sound management systems and are registered with the MoEF / Central Pollution Control Board (CPCB) will be allowed to carry out recycling. Importers, too, have to register themselves with the CPCB. As of September 18, 2009, the MoEF had registered 270 lead recyclers in India, with a total capacity of 841,000 tonnes p.a. However, battery recycling does not as such involve use of sophisticated technology, and therefore allows a huge unorganized sector to operate and thrive. Of the batteries which are to be recycled, as much as 88.5% find their way to the grey market, while just 11.5% go to OEMs. Further, the demand in Indian or Asian markets is increasing because of relocation of battery manufacturing from developed countries.

Operational Aspects of Battery Channelization

Thus 11.5% scrap goes to organised smelters
88.5% goes to Traders who could channel it to unorganised smelters or give organised smelters depending on the price

The Barton plant output is routed to the Litharge furnace with their respective equipment complement, which comprises of the Litharge furnace, grinder, cyclone and bag-house arrangements, ending in a mixer / silo, pulverizer & packing section.

- Red Lead:** It is bright red to orange-red powder, used in Lead glass, and red pigments; a paint made with Red Lead which is commonly used to protect iron and steel from rusting. Chemically, Red Lead is Lead tetra oxide, Pb_3O_4 , a water-insoluble compound that is prepared by the oxidation of metallic Lead or of litharge (Lead monoxide); the commercial product sometimes contains litharge as an impurity.

It is one of the oldest and most commonly used anti-corrosion pigments applied to metal surfaces. Orange-red in color, it forms the prime coat for most of the largest bridges in the world. It is also the primer of choice for most of the intricate steel structures of buildings built in the 20th century. Resistant to even salt water, it was liberally applied to the hulls and decks of millions of ships. Typically, 85% Red Lead (Lead concentration = 85%) was applied to these steel surfaces. Later, Red Lead primers containing as much as 95% to 98% Lead were used.

Red Lead is virtually insoluble in water. However, it is soluble in hydrochloric acid present in stomach, therefore it is toxic when ingested. It is also insoluble in alcohol. It dissolves in hydrochloric acid, glacial acetic acid, and diluted mixture of nitric acid and hydrogen peroxide. Red Lead is used to a certain extent in the ceramics and glass, paints and pigments and explosives industries. Our manufacturing plant for Red Lead have a Barton plant as the first step to produce messicot. The required input is refined Lead ingots of minimum 99.97% purity. The Barton plant output is routed to Red Lead furnace with their equipment in conjunction with a dust collection plant, conveyors, grinder and cyclone-bag-house filtration unit arrangements, culminating in a packing and storage module.

5. **Lead Sub-Oxide:** It also commercially known as Grey Oxide / Battery Oxide and is used on an extensive scale for preparation of plates in Lead Acid Batteries which requires production to strict specifications. Refined Lead (Minimum 99.97% purity) is required input for our Grey Oxide manufacturing plant, which uses the Ball Mill process. Grey Oxide produced in Ball Mill Plant, which comprises of a small Lead Melting Furnace, operating in line with a hemispherical / cylindrical ball-casting machine, which feeds the balls to the ball mill. In the ball mill, Lead is converted to Lead Sub Oxide, which is an exothermic process. In this process heat is generated and temperature of a oxide is increased to control the temperature with in the range of 115 °C to 135°C we cool the ball mill with constant flow of air and also with the water spraying system controlled through solenoid valve. The Grey Oxide is harvested through a classifier high efficiency cyclone, bag-house filtration unit and induction draft fan arrangement. It is in a grey powder form. The desired particle size and free Lead content is ensured through proper plant configuration and precise control of ID Fan suction. Our plants can produce up to 350 mesh size LSO powder.

MANUFACTURING PROCESS

We use Lead Acid Battery scrap as a major raw material in addition to other raw material like Other Lead Scrap, Lead Concentrates, Re-melted Lead & Pure Lead etc. The process, for the reclamation of the lead in the scrap automotive or industrial batteries, for further refining to 99.97 or more purity to use it in the production of lead oxides or in the casting of grids to be used again in the production of lead acid batteries is below:

PROCESS:

CUTTING /SHEAR OF TOP COVER OF THE SCRAP BATTERIES AND THE SEPARATION OF THE LEAD BEARING MATERIALS

- The scrap metal or batteries are cut with the help of cutting machine.
- The drained scrap batteries are placed on feeding roller table of the Belt conveyor and top cover is sheared off from the scrap batteries.
- The sheared scrap batteries are unloaded from discharge table of belt conveyor and the lead bearing material is emptied in the storing bins by upside down. The sheared scrap battery and empty PP boxes and top covers are sent to PP crusher section for chipping off into small chips.

CHARGE PREPARATION WITH MIXING OF THE LEAD BEARING MATERIALS WITH REDUCING AND FLUXING AGENTS

- The lead bearing materials from the battery cutting system are transformed into metallic lead by carrying out chemical reactions in a rotary furnace with the help of reagents.
- Before materials are fed into the furnace it is necessary to prepare charge where all the reagents are mixed in specific ratio with lead bearing materials to have better results through the smelting cycle.
- Also at the mixing process a controlled amount of flue dust from the filtration bag house of the furnace is incorporated into the mix, up to 10% of the charge.

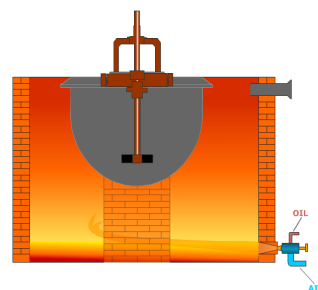

SMELTING OPERATION IN A ROTARY FURNACE & EXHAUST OF ECO- FRIENDLY FLUE GASES THROUGH POLLUTION CONTROL EQUIPMENTS

- The smelting operation is carried out in the furnace and completion of this process results into presence of two different liquid layers in the furnace, the one at the bottom is metallic lead and the other at the top is the slag.
- Liquid Lead is discharged first through a small opening at the discharge port at periphery of the furnace into Ladles of holding capacity of 0.5 MT lead metal for transferring to Refining/ Alloying kettles. Slag is discharged thru a large opening at discharge port into slag ladles. For regular operation discharge port is sealed with fire clay.
- The flue gases passes through the series of pollution control equipments to make the system eco friendly and controls emission within the prescribed limit before it emits through the stack.

REFINING OF LEAD

- The lead refining operation includes the removal of unwanted impurities present in the Lead bullion to make purity of lead as 99.97% minimum. The major impurities are antimony, tin, arsenic, copper and iron. The Lead bullion from the furnace with lowest antimony content are charged into the first refining kettle and melted.
- The refining of lead is done through pyro-metallurgical process and removal of different elements is done by the addition of different reagents at required temperature with severe agitation to the lead bath.

A hood is provided with each refining kettle to capture all smoke and dust from refining operations and convey them to the filtration system to collect the finest part of lead for further re processing in rotary furnace. Each refining kettle is equipped with an air fuel burner for melting the lead ingots and keeps the lead bath at the needed temperature.

ALLOYING OF LEAD

- For producing lead alloys we have to make refined/pure lead as prescribed above and then at the alloying elements as per the specification at different temperatures. The addition of different elements will be done at a different temperature within the presence of some particular elements.
- The refining and alloying of lead is done through pyro-metallurgical process and removal of different elements is done by the addition of different reagents at required temperature with severe agitation to the lead bath.
- A hood is provided with each alloying kettle to capture all smoke and dust from alloying operations and convey them to the filtration system to collect the finest part of lead for further re processing in rotary furnace. Each alloying kettle is equipped with an air fuel burner for melting the lead ingots and keeps the lead bath at the needed temperature.

PUMPING AND CASTING OF LEAD

- The refined or alloyed finished lead is generally cast in 23-25 kg ingots in a continuous chain casting machine with cast iron moulds which are cooled at the bottom with a spray of water and further air cooling done by blower from the top surface of ingots. A fast cooling of lead is particularly important for the lead alloys to avoid the possibility of metals separation due to differences in the specific gravity.

CAPTURE AND FILTRATION OF SMOKE AND DUST FROM REFINING/ALLOYING OPERATIONS

- Through the refining and alloying operations some smoke and dust are released, they are to be confined in site by the hood on the kettles and conveyed to the Fumigation bag house for filtering. These fine dust collected in the bag filter house is sent to rotary furnace for further processing and to recover lead.

POLLUTION CONTROL & WASTE MANAGEMENT

All processing industries generate waste. The quantities generated and their potential impacts depend on many factors, including the level of industrial development, the way in which wastes are managed, the existing state of the local environment and the capacity of the receiving media.

The output of a Lead Recycling Plant can be categorized in to following standard forms:

1. **Solids** – It is defined as the final by-product that is obtained after 2-3 run of the waste generated after recycling of fresh lead bearing material. Slag is obtained at the end of the process containing less then 2.0% of Lead content by weight in it. We make slag in non-leachable form by way of doing proper fluxing through silica and fluorospar. These are to be disposed off at proper Government approved landfill Areas. The development is going to use it in the cement industry.
2. **Liquids** – No Liquid waste is generated in our plant setup as we are using water for treatment of SOX gases which is further neutralized and re-circulated with in the system. Thus no drainage as effluents. The water loss is only due to evaporation

3. **Gases** – The gases & fumes generated in the system are effectively controlled by the Pollution control Equipments. The amount of Lead content that flue with these gases are being collected at every stage of pollution control equipments.
- a) **SOX** – Sulphur content present in the gases are being treated with water in wet scrubbing system.
- b) **CO, Lead Dust and Lead Ash etc.** – These are controlled by different sections of Pollution Control Equipments.
- c) **Nox** – In our case of operation, no nitrogenous components are produced because of the lower level of temperatures.

MARKETING STRATEGY

We being manufacturers of the products on order basis have a “Pull” strategy approach for marketing. As our products are used in industrial applications, the sales team of the company markets its products in the Indian markets and subsidiaries of the Company market the product in their various respective markets. 2. Significant Development subsequent to last period

The Directors confirm that there have been no events or circumstances since the date of the last financial statements as disclosed in this Offer Document which materially or adversely affect or is likely to affect the trading or profitability of the Company, or the value of its assets, or its ability to pay liabilities within the next twelve months.

3. Factors that may affect results of operations

The Risk Factors in this Offer Document and the following important factors could cause actual results to differ materially from the expectations.

A. General economic and business conditions:

As a company operating in India, we are affected by the general economic conditions in the country. The Indian economy has grown steadily over the past several years. This improved performance was propelled by the growth in industrial activity and robust services sector. The overall economic growth will therefore impact the results of our operations. The growth prospects of the business of the Company and its ability to implement the strategies will be influenced by macroeconomic factors.

B. Our ability to successfully implement the strategy of growth and expansion:

Our growth plans would put significant demands on the management team and other resources. Any delay in implementation of the strategy could impact the Company's roll out schedules and result in cost and time over runs.

C. Factors affecting industrial activity:

Our business is also dependent on skilled labour. Any disruption in relationship with employees may lead to labour unrest and thereby affect our business. Any change in the factors such as industrial policies, tariffs, excise duties etc may also affect the activities of the lead industry and our operations.

D. Increasing competition in the industry:

There are several small unorganized suppliers who are able to cater the industry at low cost due to non compliance of environment regulations. The technological edge available with the Company, wide product range and global footprint has helped us in retaining our customers. The entry barriers in this industry pertain to the ability to readily source the raw material and manufacture a wide range of lead products with environment friendly technology.

E. Increases in raw materials prices:

We are subject to fluctuations in the raw material prices and any abnormal fluctuations could impact our working adversely. A substantial part of our cost is freight and hence any abnormal increase in the freight cost may affect our working adversely.

F. Cyclical or seasonal fluctuations in the operating results:

Our business is not subject to any seasonal and cyclical trends.

G. Amount that the Company is able to realize from the clients:

The Company has been operating in this industry for several years and has an internal system to determine the credit worthiness of its customers. The Company sells its products and the payment cycle is between 30 to 60 days. The price and demand options submitted by the Bidder in the Bid cum Application Form will be treated as optional demands from the Bidder and will not be cumulated. After determination of the Issue Price, the maximum number of Equity Shares bid for by a Bidder at or above the Issue Price will be considered for allotment and the rest of the Bid(s), irrespective of the Bid price, will become automatically invalid.
7. The Bidder cannot bid on another Bid cum Application Form after Bids on one Bid cum Application Form have been submitted to any member of the Syndicate. Submission of a second Bid cum Application Form to either the same or to another member of the Syndicate will be treated as multiple bidding and is liable to be rejected either before entering the Bid into the electronic bidding system, or at any point of time prior to the allotment of Equity Shares in this Issue. 8. In case of an upward revision in the Price Band announced as above, Retail Individual Bidders, who had bid at Cut-off could either (i) revise their Bid or (ii) make additional payment based on the cap of the revised Price Band (such that the total amount i.e. original Bid Amount plus additional payment does not exceed Rs. 1,00,000 of the bidder wants to continue to bid at Cut-off Price), with the member of the Syndicate to whom the original Bid was submitted. In case the total amount (i.e. original Bid Amount plus additional payment) exceeds Rs.1,00,000, the Bid will be considered for allotment under the Non-Institutional category in terms of this Prospectus. If, however, the Bidder does not either revise the Bid or make additional payment and the Issue Price is higher than the cap of the Price Band prior to revision, the number of Equity Shares bid for shall be adjusted downward for the purpose of allotment, such that

no additional payment would be required from the Bidder and the Bidders shall be deemed to have approved such revised Bid at Cut-off Price.

OTHER INSTRUCTIONS

Joint Bids in the case of Individuals

Bids may be made in single or joint names (not more than three). In the case of joint Bids, all refund payments will be made out in favour of the Bidder whose name appears first in the Bid cum Application Form or Revision Form. All communication will be addressed to the First Bidder and will be dispatched to his or her address as per the Demographic Details received from the Depository.

Multiple Bids

A Bidder should submit only one Bid (and not more than one) for the total number of Equity Shares required. Two or more Bids will be deemed to be multiple Bids if the sole or First Bidder is one and the same.

In this regard, the procedures which would be followed by the Registrar to the Issue to detect multiple applications are given below:

1. All applications with the same name and age will be accumulated and taken to a separate process file which would serve as a multiple master.
2. In this master, a check will be carried out for the same PAN/GIR numbers. In cases where the PAN/GIR numbers are different, the same will be deleted from this master.

3. The Registrar to the Issue will obtain, from the depositories, details of the applicant's address based on the DP ID and Beneficiary Account Number provided in the Bid cum Application Form and create an address master.
4. The addresses of all these applications in the multiple master will be strung from the address master. This involves putting the addresses in a single line after deleting non-alpha and non-numeric characters i.e. commas, full stops, hash etc. Sometimes, the name, the first line of address and pin code will be converted into a string for each application received and a photo match will be carried out amongst all the applications processed. A print-out of the addresses will be taken to check for common names. The applications with same name and same address will be treated as multiple applications.
5. The applications will be scanned for similar DP ID and Beneficiary Account Numbers. In case applications bear the same DP ID and Beneficiary Account Numbers, these will be treated as multiple applications.
6. Subsequent to the aforesaid procedures, a print out of the multiple master will be taken and the applications physically verified to tally signatures as also father's/husband's names. On completion of this, applications will finally be identified as multiple applications.

In case of a mutual fund, a separate Bid can be made in respect of each scheme of the mutual funds registered with SEBI and such Bids in respect of more than one scheme of the mutual funds will not be treated as multiple Bids provided that the Bids clearly indicate the scheme for which the Bid has been made.

Bids made by employees under both under the Employee Reservation Portion as well as in the Net Issue shall not be treated as multiple bids.

The Company, in consultation with the BRLM, reserves the right to reject, in its absolute discretion, all or any multiple Bids in any or all categories.

Permanent Account Number or PAN

Pursuant to the circular MRD/DoP/Circ-05/2007 dated April 27, 2007, SEBI has mandated Permanent Account Number (PAN) to be the sole identification number for all participants transacting in the securities market, irrespective of the amount of the transaction with effect from July 2, 2007. Each of the Bidders, should mention his/her PAN allotted under the IT Act. **Applications without this information will be considered incomplete and are liable to be rejected.** It is to be specifically noted that Bidders should not submit the GIR number instead of the PAN, as the Bid is liable to be rejected on this ground.

Unique Identification Number ("UIN")

With effect from July 1, 2005, SEBI had decided to suspend all fresh registrations for obtaining UIN and the requirement to contain/quote UIN under the SEBI MAPIN Regulations/Circulars vide its circular MAPIN/Cir-13/2005. However, in a recent press release dated December 30, 2005, SEBI has approved certain policy decisions and has now decided to resume registrations for obtaining UIN's in a phased manner. The press release states that the cut off limit for obtaining UIN has been raised from the existing limit of trade order value of Rs. 100,000 to Rs. 500,000 or more. The limit will be reduced progressively. For trade order value of less than Rs. 500,000, an option will be available to investors to obtain either the PAN or UIN. These changes are, however, not effective as of the date of the Red Herring Prospectus and SEBI has stated in the press release that the changes will be implemented only after necessary amendments are made to the SEBI MAPIN Regulations.

Therefore, MAPIN is not required to be quoted with the Bids.

Our Right to Reject Bids

In case of QIB Bidders, the Company in consultation with the BRLM may reject Bids provided that the reasons for rejecting the same shall be provided to such Bidder in writing. In case of Non-Institutional Bidders, Retail Individual Bidders and Bids under the Employee Reservation portion, our Company has a right to reject Bids based on technical grounds. Consequent refunds shall be made by cheque or pay order or draft and will be sent to the Bidder's address at the Bidder's risk.
